

Overview

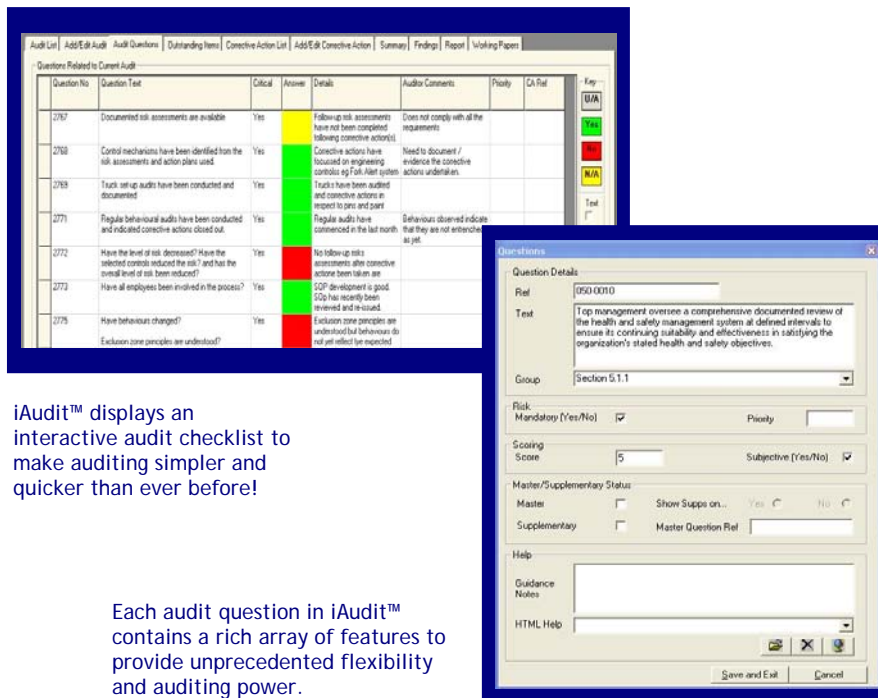

Audit Management Software for consistent, effective compliance control

iAudit™ is a desktop audit management application with powerful scheduling, auditing and analysis capability. The application implements a paperless audit management system, with users having access to centralized data.

iAudit™ enables any organization to develop and schedule its entire auditing requirement, carry out audits on-screen, and perform issue-tracking, reporting and post-audit analysis.

Features

- Fully customizable checklist content
- Customizable reporting
- Structured for best practice
- Interfaces with iMobility™ to provide mobile, Pocket PC access
- Developed for Windows 98/NT/XP
- Create audits and corrective actions in the field via Pocket PC interface
- iAudit™ is available under license on a non-concurrent, per-user basis.

The screenshot displays the iAudit software interface. The main window shows a table of audit questions with columns for Question No., Question Text, Critical, Answer, Details, Auditor Comments, Priority, and CA Ref. The table contains several rows of questions, some with 'Yes' or 'No' answers and corresponding status indicators (green for 'Yes', red for 'No', yellow for 'N/A'). A 'Question Details' dialog box is open, showing the text of a specific question (QSD 0010) and its associated metadata, including risk level, scoring, and master/supplementary status.

iAudit™ displays an interactive audit checklist to make auditing simpler and quicker than ever before!

Each audit question in iAudit™ contains a rich array of features to provide unprecedented flexibility and auditing power.

iAudit™ enables customers to:-

- Implement a corporation-wide, paperless audit management system, with users having access to centralized data.
- Develop customized audits and inspections to cater for any compliance requirement, including safety, quality, project compliance, security, etc.
- Provide both internal and external auditors with an easy-to-use application that will streamline the auditing and reporting process and avoid duplication.
- Conduct audits at remote locations and import audit data without auditors having to return to base
- Improve management and control of the auditing function with built-in Planning and Scheduling wizards.
- Improve the consistency, accuracy and timeliness of the data collection/reporting process.
- Reduce costs through improved audit efficiency, easier post audit reporting, fewer avoidable accidents, better management of risk, and lower insurance premiums.
- Reduce vendor audit activities by cooperating with other organizations using the standardized approach facilitated by iAudit™.
